LOGENIX LEADS THE WAY IN HAITI

LOGENIX, A CRITICAL RESPONDER IN MALAWI'S FIGHT AGAINST HIV & AIDS

INDUSTRY NEWS

CONNECT WITH US
As the pervasive gang violence in Haiti continues to surge, many carriers and organizations have curtailed their operations or stopped them all together. More than 200 gangs now control Haiti impacting the daily lives of approximately 11 million Haitian citizens. High levels of crime, kidnappings, and mass homicides have impaired Haitians ability to get medical attention and commute to and from work. The impact of such violence has drastically hindered Haiti’s ability to receive emergency aid and affects the government’s ability to meet the most pressing needs of the country.

In September of 2022, as a consequence of the violence, steamship lines discontinued all services to Haiti. During this time, Logenix supported our clients by providing airfreight services into Haiti for limited volumes in efforts to maintain inventory of essential supplies and resources to those who needed them the most. In doing so, we were even able to assist our clients who could no longer send large ocean shipments, by splitting the cargo into air freight capable shipments.
Finally, when ocean freight services resumed operations in December 2022, our team immediately reacted. We evaluated the challenges in providing services to and within Haiti and further developed contingency plans to combat the obstacles of the armed gangs controlling large parts of the capital.

Since December, Logenix has managed dozens of containers into Haiti for several clients with goods consisting of medical supplies, test kits, HIV and TB pharmaceuticals. We have provided delivery services into Port-au-Prince by employing private security to cross gang-blocked roads and worked with government representatives to secure the on-time delivery of the shipments.

Logenix continues to lead the way in Haiti, and across the developing world, with our renowned support of humanitarian aid, implementing the expertise needed to impact global health, disaster relief, governance, and infrastructure modernization.
For most in the developed world access to life saving medicine, quality healthcare, and medical equipment is easily accessible. It’s a stark contrast to the reality many face in developing countries where those resources are scarce. In the nation of Malawi, many struggle to get quality healthcare and timely resources are critical as 1.1 million Malawians, one of the highest rates in Africa, combat HIV & AIDS.

Logenix is a critical responder assisting to aid in Malawi’s response to the HIV & AIDS epidemic. Due to limited commercial options currently available, we recently provided chartered air freight services to Lilongwe, Malawi where we successfully delivered over 98 tons of life-saving pharmaceuticals, testing equipment, and other medical supplies.

In responding to our clients needs, Logenix provided three charter flights which consisted of ambient and cold chain goods requiring various temperature and hazmat considerations. To successfully coordinate these complicated orders, we collected ambient and hazardous cargo in advance of the cold chain goods, repacked them to fit the aircraft, correctly labelled the hazardous cargo and prepped the pallets for the flights.
We then collected the cold chain & frozen cargo just days before shipping, ensuring to refresh their temperature packaging and top off dry ice to IATA maximums. Before the charters arrived in the capital city of Lilongwe, our team arranged for emergency customs clearance as a measure to prevent the cold chain cargo from excursions.

Upon the arrival of the shipment in Lilongwe, the majority of the cargo was delivered locally to the Ministry of Health. Our team also utilized several temperature-controlled vehicles to transport a portion of the goods including cold chain commodities with different temperature requirements to Blantyre, the country’s second largest city, five hours south of Lilongwe.

Our efforts in Malawi are just one example of how our team uniquely handled the collection and packing of general, and hazardous cargo, as well as cold chain cargo which requires maintaining temperature controlled, 2-8C, and frozen temperatures. Logenix successfully executed these deliveries on time and on budget, saving our clients hundreds of thousands of dollars versus standard commercial service with minimal cold chain capacity and inability to accept ambient, hazardous, temperature sensitive goods in significant quantities.

Logenix continues to lead the way offering a comprehensive range of supply chain solutions and management of temperature control cargo in the most challenging locations throughout the developing world.
Industry News

ZIM says freight rates are “close to the bottom”

ZIM expects freight rates to start rising in the second half of 2023; forecasts its EBIT will fall from $6.2 billion in 2022 to a range of $100M - $500M in 2023.

"Hapag-Lloyd in reefer monitoring milestone"

Globe Tracker Sense reefer monitoring hardware is now installed on 100,000 reefer containers in Hapag-Lloyd’s fleet, with a target to reach 100% coverage by the end of 2023.

"World TB Day"

World TB Day is a day to educate the public about the impact of TB around the world. CDC, along with our partners and colleagues around the world share successes in TB prevention and control and raise awareness of the challenges that hinder our progress toward the elimination of this devastating disease.
Thank You!

We’d like to thank all of our clients and partners for the successful and impactful collaborations both featured and not featured in this newsletter.
